N-SENS

Optical Table

NANOSENS manufactures a wide range of solid chrome breadboards as well as passive isolation frames and supports. NANOSENS offers customer specific length, width and thickness breadboard and passive isolation frames. Breadboards feature all chrome construction and metric mounting options. Passive isolation frames present ideal, cost effective solutions for optical breadboards at customer specific dimensions. Passive isolation frames has also casters available. These casters are designed to permit easy relocation of the breadboard support frames, without removal of equipment or disassembly of the system. They are ideal for positioning the frames within tight spaces. Each caster rides on a non-marring wheel for smooth and quiet operation. Supplied as a set of four.

Technical Specifications

- Chrome material
- Provide stable platform for optical and laser applications
- Easy installation and easy transport with casters
- Customer specific design and production (metric or inc units)
- High resistance to dynamic impacts
